

Telegram → Gemini AI → Notion

Automated Task & Meeting Saver — Full Build Guide

Project Overview

Send a message to your Telegram bot and it automatically extracts task/meeting details using Gemini AI and saves them to your Notion database — with a confirmation message sent back to you.

Tool	Purpose	Cost
n8n (Self-Hosted)	Workflow automation engine	Free
Telegram Bot API	Receive messages from user	Free
Google Gemini AI	Extract structured data from text	Free
Notion API	Save tasks/meetings to database	Free

Step 1 — Install & Start n8n

1. Make sure Node.js is installed on your PC.
2. Open terminal/command prompt.
3. Run: `npm install -g n8n`
4. Start n8n: type 'n8n' in terminal.
5. Open browser and go to: `http://localhost:5678`
6. Create a free n8n account to save workflows.

Step 2 — Create Telegram Bot

1. Open Telegram and search for @BotFather.
2. Send `/newbot` and follow the prompts.
3. Give your bot a name (e.g. Fayaz Assistant).
4. Copy the Bot Token provided — save it safely.
5. Send `/start` to your new bot to initialize it.

Step 3 — Set Up n8n Workflow

1. In n8n, click 'New Workflow'.
2. Add a Schedule Trigger node — set interval to 1 minute.
3. Add an HTTP Request node after it.
 - Method: GET
 - URL: `https://api.telegram.org/botYOUR_TOKEN/getUpdates?offset=-1`
(Replace YOUR_TOKEN with your actual Telegram bot token)

Step 4 — Add Google Gemini Node

1. Click '+' after the HTTP Request node.
2. Search 'Google Gemini' and select 'Message a model'.
3. Add your Gemini API key (get it from aistudio.google.com).
4. Model: models/gemini-1.5-flash
5. Paste this prompt:

Gemini Prompt to use:

```
{{ $('HTTP Request').item.json.result[0].message.text }}
```

Based on the above message, extract the following and return ONLY JSON:

```
{
  "type": "meeting or task",
  "title": "short title",
  "date": "DD-MM-YYYY",
  "time": "HH:MM AM/PM or null",
  "description": "full details"
}
```

6. Enable 'Output Content as JSON' toggle.

Step 5 — Create Notion Database

1. Open notion.so and create a new page: 'My Tasks & Meetings'.
2. Inside, type `/database` and select 'Table - Full page'.
3. Add these columns:
 - Date (type: Date)
 - type (type: Select)
 - Time (type: Text)
 - Description (type: Text)
4. Copy the database URL — the long ID after `notion.so/` is your Database ID.

Step 6 — Get Notion API Token

1. Go to: <https://www.notion.so/my-integrations>
2. Click '+ New integration'.
3. Name: n8n assistant | Type: Internal | Click Create.
4. Copy the Internal Integration Secret token.
5. Go back to your Notion database page.
6. Click '...' (three dots) → Connections → Search 'n8n assistant' → Confirm.

Step 7 — Add Notion Node in n8n

1. Click '+' after Gemini node.
2. Search 'Notion' and select it.
3. Resource: Database Page | Operation: Create.
4. Connect with your Notion credential.
5. Database: By ID → paste your Database ID.
6. Title expression:

Title:

```
{{ $('Message a model').item.json.content.parts[0].text.match(/"title":\s*"([^\"]+)"/)[1] }}
```

7. Add Property: Date

```
{{ $('Message a model').item.json.content.parts[0].text.match(/"date":\s*"([^\"]+)"/)[1].split('-').reverse().join('-') }}
```

8. Add Property: type

```
{{ $('Message a model').item.json.content.parts[0].text.match(/"type":\s*"([^\"]+)"/)[1] }}
```

9. Add Property: Time

```
{{ $('Message a model').item.json.content.parts[0].text.match(/"time":\s*"([^\"]+)"/)[1] }}
```

Step 8 — Add Telegram Confirmation Node

1. Click '+' after Notion node.
2. Search 'HTTP Request' and add it.
3. Method: POST
4. URL: https://api.telegram.org/botYOUR_TOKEN/sendMessage
5. Body (JSON):

Step 9 — Publish & Activate

1. Click 'Publish' button (top right in n8n).
2. Toggle the Active switch ON.
3. Your workflow is now running every minute!
4. To use: just send a message to your Telegram bot.
5. IMPORTANT: Your PC must be ON and n8n must be running.

Step 10 — How to Use Daily

1. Turn on your PC.
2. Open terminal and type: n8n
3. Send a message to your Telegram bot like:
"Meeting with professor on 15-03-2026 at 3pm about project"
4. Within 1 minute it will be saved in Notion automatically!
5. Your bot will send a confirmation message back to you.

```
{"chat_id": "{{ $('HTTP Request').item.json.result[0].message.chat.id }}",  
"text": "Saved to Notion!"}
```

Uploading n8n Workflow to GitHub

Yes! You can export and upload your n8n workflow JSON to GitHub:

1. In n8n, click the three dots (...) menu in your workflow.
 2. Click 'Download' — this saves a .json file.
 3. Create a new GitHub repository (e.g. telegram-notion-ai-bot).
 4. Upload the .json file + this PDF guide.
 5. Add a README.md describing your project.
- Others can import your workflow by going to n8n → New Workflow → Import from file.
